Maximize School ESSER Funding
To Secure Your Campus

School Security Starts With a Plan - We Can Help

School districts are receiving an unprecedented amount of government funding to offset the impact of COVID-19, giving districts and schools the much-needed financial resources to implement recommended best practices to reopen and stay safe. Developing a strategic plan allows these funds to be used to help schools with COVID-19 mitigation and long-term safety measures.

PASS Security can provide a strategic plan for your campus to improve safety and security with **Video Surveillance, Thermal Cameras, Video Management** and much more regardless of whether you are seeking government emergency relief funding for your school or not.

PASS SECURITY

VIDEO SURVEILLANCE
Contact Tracing Using Video Analytics

Not only do school security cameras help you maintain safety around your campus, they can be used as a contact tracing tool by understanding where an infected individual has been, which doors they accessed and who else may have come in contact with those doors and that individual.

THERMAL CAMERAS
Contactless Temperature Screenings

By using heat-detecting systems, it is possible to see if a student, faculty member, or visitor to the school is exhibiting signs of illness through elevated temperature.

CROWD MANAGEMENT SOFTWARE
Ensure Social Distancing is Upheld

This feature monitors proximity between two or more individuals and detects violations when, or for how long, this distance falls under the recommended threshold of 6 feet. Reports can be run to help administrators and school resource officers study traffic patterns and density, identify hotspots, and understand peak periods when violations occur.
