

# AI-Powered Security Technology Disarms School Gun Violence

## Create a Safer Learning Environment

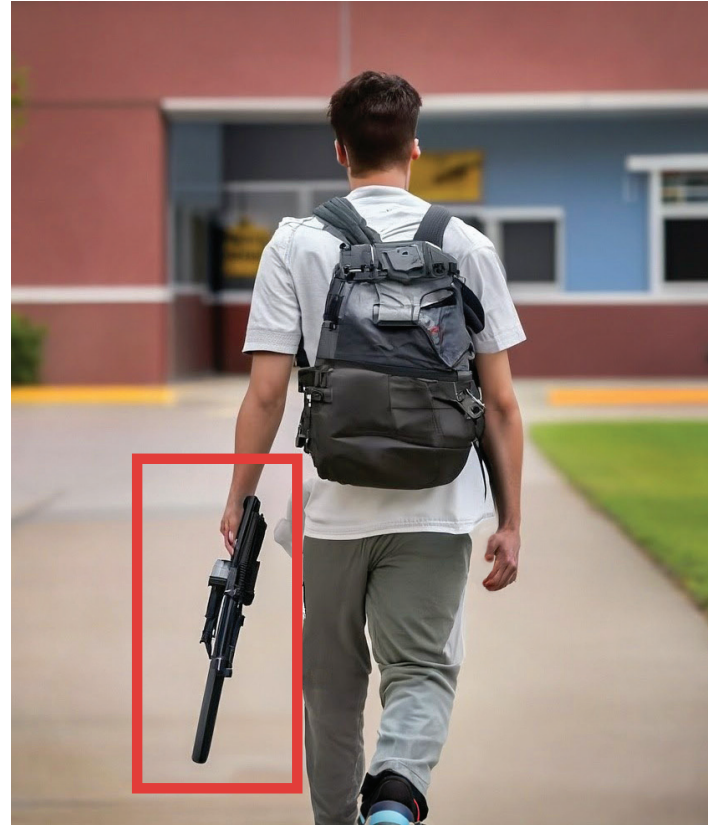

The *FBI* and *Center for Education* report that the majority of school shootings occur outside of school buildings, in areas difficult to enforce controlled access security.

But what if you had the security technology to expand your school's safety zone perimeter to include these critical *outside* areas on school grounds – parking lots, commons areas and athletic fields?

### How it Works

When an armed student or outside assailant is visibly detected by security cameras brandishing a firearm on school grounds, an image is captured and displayed on a security monitor with the weapon highlighted within a bright red box. An emergency alert and video clip are then immediately sent to designated school personnel and even local law enforcement.

This pre-emptive warning alert system buys your team precious minutes to execute a scripted emergency lockdown procedure: secure all entry doors, shelter students and staff in designated areas, communicate with local law enforcement to coordinate next steps.

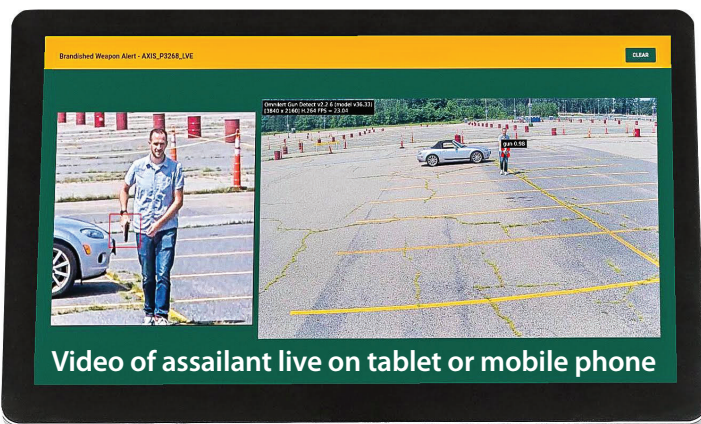

**Identify Assailants Before They Reach Your Building**

### Give Students a Fighting Chance Virtually Anywhere on Campus

This life-saving scenario is now possible thanks to award-winning weapons detection security systems developer *Evolv Technology* and their new revolutionary outdoor AI-powered security camera surveillance system, *Evolv Extend*.

This breakthrough technology can identify people brandishing most types of firearms up to 100 ft. in distance, long before a live shooter reaches your building or potentially before a student altercation involving a firearm turns deadly.

PASS Security's specially trained and certified school security consultants are recognized industrywide and committed to creating healthy, gun-free learning environments in all schools.

To make this a reality, *PASS Security* has teamed with *Evolv Technology*, the acknowledged industry expert in concealed weapons detection systems technology, and trusted by more than 450 U.S. schools to protect their students and staff from gun violence.

## Why Evolv Extend?

### Preemptive Protection:

The battle against gun violence is lost if your strategy is only to *react*. Winning this battle means *anticipating* and taking *proactive* action to defuse situations *before* they turn deadly.

### Alleviates Anxiety & Demands on Staff:

With AI-powered security cameras on the outside of your buildings scanning for firearms, this allows your staff the freedom and flexibility to go about normal routines with confidence and peace of mind.

**Early Warning Alerts:** Create a critical time-and-distance safety buffer for your students and staff to seek shelter and for law enforcement and school security to take appropriate actions.

Ask us how you can integrate *Evolv Extend* with the ***Evolv Express*** walk-through weapons screening system for total protection. *Evolv Express* far outperforms traditional metal detectors because of its Evolv's AI technology that can calculate the actual *size* and *shape* of concealed items, identify their location on the person, and display an image on a screen with a red box highlighting the weapon.

**Certified Nationwide Installation & Service**
